

REEF FRIENDLY SUNSCREEN GUIDE

Hawai'i DLNR strongly advises against using popular chemical sunscreens ingredients near coral reefs. Hormone disruptors, toxins, carcinogens, preservatives can all negatively effect corals, marine life, people. Look out for: **oxybenzone, homosalate, octisalate, octinoxate, octocrylene, avobenzone, dimethicone, parabens, BHT, nanoparticles, propylene glycol, fragrances, retinyl palmitate....**

Our "Reef Friendly Sunscreen Guide" includes broad spectrum mineral sunscreens preferably with non-nano zinc / or titanium as active ingredient. In Hawai'i with above average UV index, consider mineral content of 20%+. Some brands offer products dedicated to water / sports. 🌊 denotes **very water resistant** with no water-soluble fillers (H2O, Aloe, Alcohols). Avoid ALL aerosols as these do not apply evenly; they atomize toxins, make them airborne, travel hundreds of feet in the wind, end up in people's lungs, coat sand and enter the ocean at high tide. FDA recommends to *never* spray these directly on children.

If can buy local! Reef & Eco Friendly Sunscreens are sold in Hawai'i surf / paddle / dive shops, natural food, convenience, drug, boutiques.... If your fave spot doesn't stock any, pass this along to their buyer. We've included links so you can also shop direct. Some may seem more costly, but many are concentrated formulations, utilizing pure quality NonGMO, Organic Ingredients, Certified Natural, Cruelty Free, etc.
